Profile

I'm a react developer with deep understanding of the stack, starting with network level all the way to client-side. My experience is not only deep, it is also wide: I have developed mobile apps, designed marketing materials, logos and UI from scratch, wrote selenium parsers, trained neural networks and traced PCBs. And that's not even covering my excellent communication skills, open-minded result-oriented approach, and an eye for detail.

Experience

Full-stack developer @ QIWI Bank (Postamat technologies Ltd) – April, 2017-June, 2018

Actively involved in making architecture decisions, implementation and maintenance of multiple internal services of varying complexity. Some of those include frontend for a map-based SPA written in AngularJS+MobX, both front- and backend using VanillaJS and Django/DRF for another project and web scrapers utilizing Selenium and some voodoo magic.

Senior Frontend Developer @ marketguard.me (MarketGuard Ltd) – July, 2018-October, 2018

Solely responsible for implementing most of the frontend (React) for https://naga-guard.com according to specifications and mockups, with some improvisation from me in animation department.

Senior Web Developer @ CityLife Corp – December, 2018 – March, 2019

Fixing bugs in existing codebase and extending it with new features, implementing layout from Figma. Code reviews, sprint planning etc. Participation in development of UIKIT (design proposals, implementation of components, repo maintenance). Implementation of fully custom react rendered svg chart via d3. Stack: React + Redux / Apollo / Styled-components / Lodash / Recompose.

Lead React Developer @ Noveo group – April, 2019 – April, 2020

Working on multiple projects for European customers and internal usage:
Project A: Next.js / React / Redux + saga / Styled components / JSON:API - implementing new features.
Project B: Typescript / React / Mobx + hooks / Styled components - implementing project from scratch, code reviews.
Project features modular frontend architecture with code splitting.
Project C: Typescript / React / Redux + saga / Styled components + SCSS - maintenance, new features.
Project D: JS / React / Redux + custom side-effects lib / SCSS - implementing new features.
Project E: Typescript / Redux-toolkit + saga / Styled components - leading development of one of the interenal tools
Apart from that I participated in candidate interview process as react/js specialist, developer mentoring, and project estimations.

Proton Calendar: react/typescript/openpgp/hooks - bug fixes, refactor, code/test coverage. Created and maintained proton-lint, which is eslint-typescript-airbnb fork with some customization.

Refactored and modernized existing code base (react/reflux/bootstrap/jquery > react/hooks/styled-components), fixed bugs, implemented new designs.

Education	2014 - ITMO University, Bachelor's degree in Telecommunications
	2015 - Lappeenranta University of Technology - Exchange student, Software Engineering
	2016 - ITMO University, Master's degree in Information and Communication Technologies
Hackathons	2015 - LUTES Hackathon, winner
	2015 - Ultrahack, contender (IoT)
	2016 - #vhack by Forbes/Beeline, contender (Machine Learning)
	2017 - AdHack Galaxy, winner
Skills	Backend development (Flask, Django + Express, Koa), Frontend development (JS/TS: React, Vue; CSS: LESS, SASS, Styled Components/Emotion/Stylis.js; State management: Redux-toolkit/Saga/Mobx) using modern language features (async, decorators, generators, etc). Have experience implementing custom React-native charts D3. Familiar with object-oriented and functional paradigms. I can write unit tests using Jest/RTL/Selenium. Basic practical experience writing neural networks on Theano/Lasagne and Keras, deployment/maintenance of SIP servers and client hardware. Theoretical and practical knowledge of software development methodologies, both agile/lean and formal (RUP).
Certificates	2011 - Intro to Artificial Intelligence by Stanford (72.1%)
	2015 - PTE Academic English (84/90)
Languages	Russian / Native
	English / Fluent
